Supplemental figure for:

**SUPPLEMENTAL FIGURE 4**

Spread of laurel wilt in an avocado orchard in south Florida in which tree removal and fungicide treatment were not used to manage the disease. Data are weekly summaries for contiguous trees in four disease foci, from November 2013 to May 2014, and are (A) cumulative totals of symptomatic trees and (B) weekly new cases of the disease. The average minimum temperature (°F) during the same weeks (C), illustrates an association between temperature and disease spread.
